

BTS Strategic Asset Allocation Program

Alpha Growth & Income at Trust Company of America

Analysis Period: Start: October 1, 2001

End: December 31, 2009

Benchmark 1: S&P 500 BarCap Agg 70-30

S&P 500: S&P 500 TR

Portfolio Weighted Avg

Internal Expense: 0.91

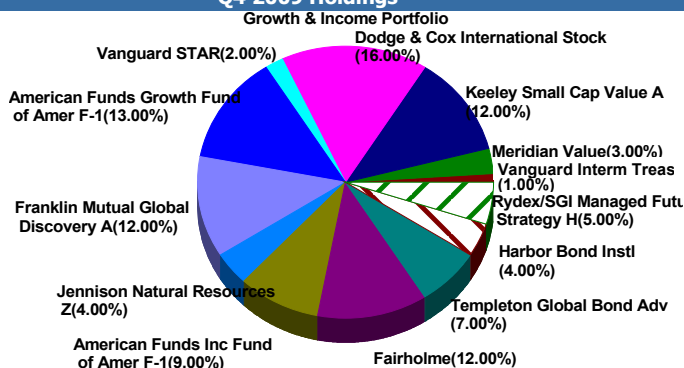

Portfolio Description

The Alpha Growth & Income Portfolio is intended for the investor seeking current income from investments with the potential for capital appreciation. BTS will select funds we believe meet these criteria. The appropriate time horizon for this investment is ten years or more. The Growth & Income benchmark is 70% of the S&P 500 and 30% of the Barclays Capital Aggregate Bond Index, rebalanced quarterly. You should consider carefully the Alpha Growth & Income Portfolio's investment goals and horizons, risks, charges and expenses before investing. Returns are shown net of a 2.1% maximum annual fee charged quarterly, in advance.

THIS MATERIAL IS NOT AN OFFER OF ANY FUND SHARES.

BTS Asset Management is affiliated with BTS Securities Corporation. Securities are offered through BTS Securities Corporation and other FINRA member firms. Advisory services are offered through BTS Asset Management.

The BTS Strategic Portfolios show quarterly rebalancing to previously determined allocation percentages. Asset allocation recommendations are likely to change. It should not be assumed that investment decisions made in the future will be profitable or will equal the performance shown above. Results assume that all exchanges were timely. Delays in implementing exchanges may affect performance. The above illustration reflects a generally rising securities market. Investing directly in the S&P 500 or Barclays Capital Aggregate Bond Index is not possible. The volatility of the index is materially different from that of the portfolio. Performance will vary depending on the particular funds selected and there is no guarantee that funds used in the program will closely match the above indexes. Mutual funds have their own fund expenses, which costs are borne by Client. Performance results are net of the maximum possible fee of 2.1%. Results include the reinvestment of dividends and capital gains, but do not include possible sales charges, transaction fees, or custodial fees. 2001 returns are for partial year only, beginning October 1, 2001 and ending December 31, 2001.

Risks

Investments are subject to risk; loss of capital is possible. Investing in bonds and high yield securities involves additional risks, including interest rate risk, credit risk, and reinvestment rate risk. Investing in small cap stocks involves additional risks, including operating risk and liquidity risk. Investing in international and emerging markets stocks involves additional risks, including political risk and currency risk. *You should carefully consider the investment objectives, risks, and charges and expenses of each investment company included as part of the Strategic Asset Allocation Program before investing. The prospectuses contain this and other information. You should carefully read the prospectus of each investment company, which are available from your financial representative upon request.*

Definitions

The S&P 500 includes 500 leading companies in leading industries of the U.S. economy and is a proxy for the total stock market.

The Barclays Capital Aggregate Bond Index is comprised of government securities, mortgage-backed securities, asset-backed securities and corporate securities with maturities of one year or more to simulate the universe of bonds in the market.

Portfolio Weighted Avg Internal Expense is the weighted average of the internal expenses of the mutual funds used.

VAMI reflects the growth of a hypothetical \$1,000 in a given investment over time. The value is equal to \$1,000 at inception. Subsequent month-end values are calculated by multiplying the previous month's VAMI index by 1 plus the current month rate of return.

Compound ROR stands for Compound Rate of Return, and measures the compounded growth rate (annualized) since inception.

Standard Deviation measures the degree of variation of returns around the average return; the higher the volatility, the higher the standard deviation.

Sharpe Ratio is a risk-adjusted performance measure (the incremental average return over the risk-free rate - represented as 3% - divided by risk), where risk is defined by standard deviation. A higher Sharpe ratio may indicate higher risk-adjusted returns.

Sortino Ratio is a risk-adjusted performance measure (the incremental average return over the minimum acceptable return - represented as 6% - divided by risk), where risk is defined by downside deviation. A higher Sortino ratio may indicate higher risk-adjusted returns.

Downside Deviation considers returns that fall below the minimum acceptable return.

Maximum Drawdown is the largest percentage drawdown that the investment has experienced.

Alpha measures a manager's value-added return over a benchmark index by comparing its actual return to the return expected based on the risk level.

Beta measures sensitivity to market movements relative to a benchmark index.

Correlation and *R-Squared* (Correlation Coefficient) measure how two securities move in relation to one another.

* Alpha, Beta, Correlation, and R-Squared show the value for the BTS portfolio versus the listed benchmark.
